SERVER CONFIGURATION MANAGEMENT AND TRACKING

Abstract of the Disclosure

A web hosting system comprises a plurality of geographically separate web hosting facilities with a plurality of servers located at each of the facilities having internet resources hosted thereon. A network accessible centralized database remote from at least some of the web hosting facilities contains information comprising one or more of server serial number, server model, server facility location, server location within a facility, server speed, server memory capacity, server traffic, and server software configuration for at least some of the servers. In some embodiments, different users are allowed to access different information in the database.
